Recommendation Olha Vasylevska

To whom it may concern,

I am pleased to recommend Olha Vasylevska for a Frontend Developer role.

Olha worked with us at Medify from March 2025 to May 2026, contributing to our patient-facing platform. She refactored the legacy codebase into Vue 3 and established a clean, future-proof architecture. She also implemented new features, improved responsiveness and accessibility, and enhanced the overall UI and user experience. In addition, she played a vital role in migrating our dashboard platform to Vue 3.

Olha consistently took ownership of complex projects from start to finish, while collaborating closely with our backend team throughout a parallel migration process. She works autonomously, takes responsibility for her work, and can be relied upon to deliver high-quality results.

Although we would be happy for Olha to stay, I recommend her without hesitation as she explores new opportunities that will support her continued personal and professional growth.

Sincerely,

René Louis
CEO Medify
